(Quick Configuration on site)

Effortless parking management

- Connect maximum 5 mobile phones to control each parking barrier
- Detect the opening/closing status

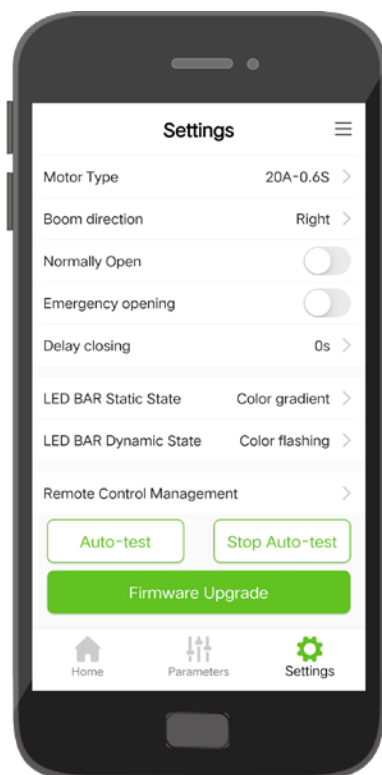

Quick Configuration on site

- Configure the boom length, based on the actual installation on site
- Adjustable opening and closing speed based on the length of the boom
- Adjustable opening and closing angles of the boom based on the limitations of the on-site environment

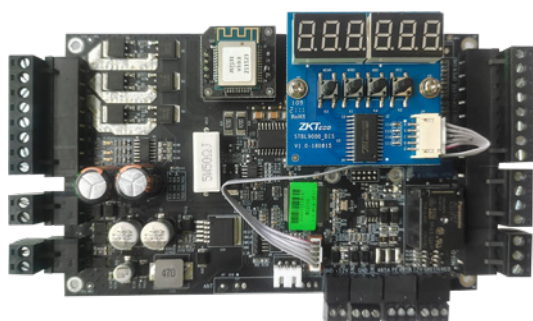

Multiple function settings

- **Normally open:** Lock the open state during peak hours
- **Emergency opening:** In an emergency, you can quickly disconnect the power supply and the barrier boom will automatically open
- **Delay automatic closing:** When no one close the barrier on site
- **LED BAR status control:** You can set the different display states of the LED strip according to your preferences
- **Remote controller management:** You can easily match or delete the remote controller from the APP, it supports up to 50 remote controllers
- **Auto test mode:** You can check the stability of the machine through the auto matic test mode
- **Firmware upgrade:** When you change the motherboard, you can also upgrade the firmware of the new motherboard
